

Project : **The Power Is In Ourselves**

Our aim in our project is to make our students work more actively by having their right and left brains work at the same time. In our project, we want our students to gain the skills to do activities that will enable their right and left brains to work at the same time, and to improve their brain capacities by integrating these skills into education and training. Thus, we aim to help our students increase their self-confidence and at the same time gain 21st century skills. We came together as the countries of Turkey, Romania, Jordan, Macedonia, Georgia and Italy and we decided to work on a project where our students could actively train both sides of their brains. Our project is an international project and is for the 7-11 age category. The founding countries of our project are Turkey and Romania. Our project will start in December 2022 and end in May 2023. In our project, we are planning to make bracelets from macrame, bracelets from sand beads and necklaces. Thus, we want to introduce new hobbies to our students. In addition, thanks to our project, our students will get to know new countries and their cultures, make new friendships and improve their English language while communicating with them. At the end of the project, participating students will be awarded eTwinning certificates with the theme of 'Brain and Active work'. The results of our project will be announced to large audiences on social media channels such as twinspace, school website, facebook, as the final product, e-newspaper.
