

## **Project :The Future Will Come With These Professions**

There is no doubt that technology is developing and changing very quickly. These developments make our lives easier and radically change all our habits. While our eating and drinking habits, our understanding of entertainment, our social life, our technology is changing day by day, it is impossible for our working styles and job descriptions not to be affected by this change. In many countries around the world, it is estimated that 50 percent of the workforce will be taken over by automated robots by 2035. So how much will these changes affect which sectors? What kind of new jobs will emerge as humans lose their jobs to robots? Here we aim to introduce our students to the professions that will exist in the future, increase in importance or multiply their value, and that need to be considered when planning a career, and to guide our students..
